PROJECTS

BloodWeb — *Real-time Blood Donation System*

a full-stack blood donation request platform built to facilitate emergency communication between blood donors and recipients. Designed with accessibility and urgency in mind, the system supports live notifications, request management, and secure role-based interactions. Used AI tools (e.g., ChatGPT) to accelerate backend implementation, while focusing on learning authentication, database integration, and deployment hands-on.

Tech Stack: Node.js, Express.js, MongoDB, Mongoose, JWT, CORS, HTML, CSS, JavaScript, Socket.io

Web Hosting : Frontend on Netlify, Backend on Render

🔗 **GitHub:**
